

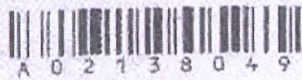

Figure 6 shows the results of the analysis of variance for the effect of the number of trials on the dependent variables. The main effects of the number of trials were significant for all dependent variables except the error rate ($F(1, 10) = 0.78$, $p > 0.05$). The interaction between the number of trials and the type of feedback was also significant for all dependent variables except the error rate ($F(1, 10) = 19.1$, $p < 0.001$). The interaction between the number of trials and the type of feedback was also significant for all dependent variables except the error rate ($F(1, 10) = 19.1$, $p < 0.001$).
